GlucoBuddy Report

Educational decision-support summary

Liam Jones

Date range: 18 Apr 2026 to 01 May 2026
Generated: 01 May 2026, 23:38

Average glucose	Time in range	Hypos	Hypers
8.91 mmol/L	**63.8%**	**1**	**11**
47 logged readings	Based on logged readings within target range	Readings below 4.0 mmol/L	Readings above 10.0 mmol/L

Event overview

Estimated episode durations are based on the spacing between your logged readings.

Hypoglycemia episodes

1 episodes, total estimated duration 1h 9m
Average duration 1h 9m

Hyperglycemia episodes

6 episodes, total estimated duration 24h 57m
Average duration 4h 10m

Key insights

Rule-based observations drawn from the selected date range.

- **Trend** When glucose starts high, correction doses may be less effective than expected.
- **Trend** Your glucose is often high in the afternoon (12:00-14:00).
- **Trend** High glucose readings have been frequent over the last 14 days.
- **Trend** The 18:00-20:00 window is meaningfully higher than your usual glucose pattern.

Glucose chart

Visual trend across the selected report range.

Time-of-day averages

Target range: 4.5 to 9.5 mmol/L

Average glucose in each 2-hour block across the selected date range.

Time block	Average glucose	Readings	Status
00:00-02:00	9.16 mmol/L	5	In range
02:00-04:00	5.17 mmol/L	3	In range
04:00-06:00	8.80 mmol/L	3	In range
06:00-08:00	6.40 mmol/L	1	In range
08:00-10:00	No data	0	No data
10:00-12:00	4.30 mmol/L	2	Below range
12:00-14:00	10.50 mmol/L	6	Above range
14:00-16:00	8.37 mmol/L	6	In range
16:00-18:00	6.80 mmol/L	2	In range
18:00-20:00	12.85 mmol/L	4	Above range
20:00-22:00	8.83 mmol/L	6	In range
22:00-24:00	9.43 mmol/L	9	In range

Interpretation notes

Time in range is estimated from logged readings rather than continuous sensor data. Episode durations are approximate and should be interpreted as pattern prompts, not treatment instructions.
